WS 2022	Assignment 1	Emmy Noether	077734
Group 123	_	Margaret Hamilton	160769

This is our Assignment!

We can now use pretty versions of φ and ε , the round verion of φ is also available: φ .

Common logic symbols are easy to use:

If $FO \supseteq \Phi \models \mathfrak{A}$ for some infinite \mathfrak{A} , then for every cardinal $\kappa \geq |\mathfrak{A}|$ there exists a $\mathfrak{B} \models \Phi$ with $|\mathfrak{B}| \geq \kappa$.

And the same is true for complexity classes:

For any function $f(n) \in \Omega(\log n)$,

 $\mathsf{NSPACE}(f(n)) = \mathsf{co-NSPACE}(f(n)) \text{ and } \mathsf{NSPACE}(f(n)) \subseteq \mathsf{SPACE}(f(n)^2).$

We can also make some graphs:
